# WHAT MAKES THE PRIMAVEGA BRAND UNIQUE?

## We ensure the highest standards of the production process:

- We select appropriate varieties of plants and their seedlings.
- We supervise the plant vegetation process.
- We test the quality of water and soil.
- We inspect every batch of raw material.
- The freshness of the vegetables is crucial for us, which is why the time it takes for the lettuce to arrive at the plant is a maximum of 3 hours.

## Our certificates:

## We ensure the availability of vegetables and continuity of supply throughout the year:

- We are part of the Green Holding Group, in which its individual entities are highly specialized: from field and hydroponic crops, through production, transport and refrigerated logistics, to deliveries to the customer. As a result, the journey of vegetables from farm to table is carefully monitored by us, and each stage is controlled. Providing products all year round is our priority.
- We diversify our sources of supply to adapt to weather conditions, seasons and customer demand.

## We act responsibly and protect the environment:

- In the production process, we use environmentally friendly technologies that reduce the amount of factors polluting the atmosphere, water and soil.
- Our plants are equipped with intelligent electrical and cooling systems.
- We use natural plant protection products.
- We use fertilizers of plant origin.
